

Avenue Q Stage Set is comprised of the following:

- Street in 7 sections as PDF Drawing
- 2400mm x 1200mm x 1800mm high (approx) mobile deck for rear of centre house
- 1200mm wide x 450mm deep x 1600mm high bar to be positioned behind house 2
- 1200mm wide x 700mm deep x 1600mm high Lounge " " " " "
- two sets of treads approx 1200mm wide x 1500mm high x 900mm deep
- six "A-frames" to rear of flats
- 2 No. Beds

The set comprises of the three houses, each sub-divided into two sections vertically, the two sections of each house are screwed together horizontally and then held in place vertically by the "A-frames" which are secured by pin hinge connections and in turn screw fixed to the deck.

The rear platform to house 1 is on legs and in turn fixed to the "A frame" with the platform having a raised area over the door to permit the use of the door and House 3 is simply screw fixed to the "A" Frame. The platform to the central house was free standing as it needs to be moved in and out to facilitate the insertion of the "bar" and the "lounge" plus the operation of the "roller shutter", along with the two "slash" curtains

The only elements that we flew were the two beds; we do not have anything for the Empire State building as we ran out of height! But if you can fly then you may be able to construct your own.

If you require any further details please do not hesitate to ask.
